

RFP #SI-RFP-24-004 / IHS Project 22-C56

San Ildefonso Pueblo Water Meter and Service Connection Inventory

Supplemental Information

In response to a question from an attendee of the pre-submittal meeting, the IHS and Pueblo project managers provide the following response.

Question:

Considering each service connection as “a unit”, is the number of these units that have existing meters known? If not an exact number perhaps an estimated percentage?

Response:

According to the San Ildefonso Facilities Department:

1. In the “Pajarito Service Zone” (Figure 2 in the RFP Attachments), all 9 houses on Yopovi Po have meters and there are 4 houses along Little Bird Road to the north that have meters. Available information on these meters will be available to the selected contractor. There are 8 other homes in this area east of Hwy 30 (on Avanyu Po, Little Bird Road and Hay Gan Po) that have water service but are not metered. The other houses in this area do not currently have water service and are not included in the scope of the inventory. Note that the two subdivisions across Hwy 30 to the west are also not included in the scope of the inventory at this time.
2. As was described in the RFP, on the east side of the Rio Grande, there is one meter serving all 28 homes in the Black Mesa subdivision. The Pueblo does not have records of any other water meters on the east side of the river.
3. Based on this, 13 out of the estimated 195 “units” in the inventory areas (6.7%) currently have meters.
